All rights reserved. No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, mechanical, photocopying, recording or otherwise, without the prior permission of the publisher, Elsevier Science Publishers B.V. (North-Holland), P.O. Box 1991, 1000 BZ Amsterdam, The Netherlands.

Special regulations for authors – Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.

Submission of an article entails the author's irrevocable and exclusive authorization of the publisher to collect any sums or considerations for copying or reproduction payable by third parties (as mentioned in article 17 paragraph 2 of the Dutch Copyright Act of 1912 and in the Royal Decree of June 20, 1974 (S.351) pursuant to article 16b of the Dutch Copyright Act of 1912) and/or to act in or out of Court in connection therewith.

Special regulations for readers in the U.S.A. – This journal has been registered with the Copyright Clearance Center, Inc. Consent is given for copying of articles for personal or internal use, or for the personal use of specific clients. This consent is given on the condition that the copier pays through the Center the per-copy fee stated in the code on the first page of each article for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. The appropriate fee should be forwarded with a copy of the first page of the article to the Copyright Clearance Center, Inc., 21 Congress Street, Salem, MA 01970, U.S.A. If no code appears in an article, the author has not given broad consent to copy and permission to copy must be obtained directly from the author. All articles published prior to 1981 may be copied for a per-copy fee of US $2.25, also payable through the Center. This consent does not extent to other kinds of copying, such as for general distribution, resale, advertising and promotion purposes, or for creating new collective works. Special written permission must be obtained from the publisher for such copying.

CUMULATIVE AUTHOR INDEX OF VOLUMES 21–40

1. Adam, J.C., A. Gourdin Serveniere, J.C. Nedelec and P.A. Raviart, Study of an implicit scheme for integrating Maxwell's equations — 22 (1980) 327– 346
2. Amara, M., P. Joly and J.M. Thomas, A mixed finite element method for solving transonic flow equations — 39 (1983) 1– 18
3. Andreaus, U. and A. Sawczuk, Deflection of elastic-plastic frames at finite spread of yielding zones — 39 (1983) 21– 35
4. Argyris, J.H. and J.St. Doltsinis, On the large strain inelastic analysis in natural formulation. Part II. Dynamic problems — 21 (1980) 91– 126
5. Argyris, J.H., M. Haase and H.-P. Mlejnek, On an unconventional but natural formation of a stiffness matrix — 22 (1980) 1– 22
6. Argyris, J.H., H. Balmer, M. Kleiber and U. Hindenlang, Natural description of large inelastic deformations for shells of arbitrary shape – application of TRUMP element — 22 (1980) 361– 389
7. Argyris, J.H., P.C. Dunne, Th.L. Johnsen and H.P. Mlejnek, A new iterative solution for structures and continua with very stiff or rigid parts — 24 (1980) 215– 248
8. Argyris, J.H. and J.St. Doltsinis, On the natural formulation and analysis of large deformation coupled thermomechanical problems — 25 (1981) 195– 253
9. Argyris, J.H. and Sp. Symeonidis, Nonlinear finite element analysis of elastic systems under nonconservative loading – natural formulation. Part I. Quasistatic problems — 26 (1981) 75– 123
10. Argyris, J.H. and Sp. Symeonidis, A sequel to: Nonlinear finite element analysis of elastic systems under nonconservative loading – natural formulation. Part I. Quasistatic problems — 26 (1981) 377– 383
11. Argyris, J.H., K. Straub and Sp. Symeonidis, Nonlinear finite element analysis of elastic systems under nonconservative loading – natural formulation. Part II. Dynamic problems — 28 (1981) 241– 258
12. Argyris, J.H., M. Haase and H.P. Mlejnek, Some considerations on the natural approach — 30 (1982) 335– 346
13. Argyris, J.H., J.St. Doltsinis, P.M. Pimenta and H. Wüstenberg, Thermomechanical response of solids at high strains – natural approach — 32 (1982) 3– 57
14. Argyris, J.H., K. Straub and Sp. Symeonidis, Static and dynamic stability of nonlinear elastic systems under nonconservative forces – natural approach — 32 (1982) 59– 83
15. Argyris, J.H., An excursion into large rotations — 32 (1982) 85– 155
16. Argyris, J.H., J. Szimmat and K.J. Willam, Computational aspects of welding stress analysis — 33 (1982) 635– 666
17. Argyris, J.H., B. Boni, U. Hindenlang and M. Kleiber, Finite element analysis of two- and three-dimensional elasto-plastic frames – the natural approach — 35 (1982) 221– 248
18. Argyris, J.H. and H.H. Flüh, On the dynamic response of lightweight structures — 38 (1983) 347– 369

INFORMATION FOR CONTRIBUTORS

Manuscripts should be sent in triplicate to one of the Editors. All manuscripts will be refereed. Manuscripts should preferably be in English. They should be typewritten, double-spaced, first copies (or clear Xerox copies thereof) with a wide margin. Abstracts, footnotes and lists of references should also be double-spaced. All pages should be numbered (also those containing references, tables and figure captions). Upon acceptance of an article, author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.

Abstracts
The text of a paper should be preceded by a summary in English. This should be short, but should mention all essential points of the paper.

Figures and tables
The drawings for the figures must be submitted on separate sheets, drawn in black India ink in large size and carefully lettered (with the use of stencils). The lettering as well as the details should have proportionate dimensions, so as not to become illegible or unclear after the usual reduction by the printers; in general, the figures should be designed for a reduction factor of two or three. Mathematical symbols should be entered in italics, where appropriate. Each figure should have a number and a caption; the captions should be collected on a separate sheet. The appropriate place of a figure should be indicated in the margin. Tables should be typed on separate sheets. Each table should have a number and a title. The appropriate places for the insertion of tables should be indicated in the margin.

Formulae
Displayed formulae should be numbered and typed or clearly written by hand. Symbols should be identified in the margin, where they occur for the first time.

References
In the text, reference to other parts of the paper should be made by section (or equation) number, but not by page number. References should be listed in a separate sheet in the order in which they appear in the text.

COMPLETE INSTRUCTIONS TO AUTHORS are published in every issue, and copies can also be obtained from the Editors and the Publisher, Elsevier Science Publishers B.V. (North-Holland), P.O. Box 1991, 1000 BZ Amsterdam, The Netherlands.

INFORMATION FOR SUBSCRIBERS

COMPUTER METHODS IN APPLIED MECHANICS AND ENGINEERING will publish 6 volumes in 18 issues in 1984. The total subscription price for 1984 will be SFrs. 1590.00 postage and handling included.
Orders for subscriptions should be sent to Elsevier Sequoia S.A., P.O. Box 851, CH-1001 Lausanne 1, Switzerland, or to any subscription agent.
Claims for missing numbers should be made within three months, following the date of publication. The Publisher expects to supply missing numbers free only when losses have been sustained in transit and when the reserve stock will permit.

INFORMATION FOR ADVERTISERS

Advertising orders and inquiries can be sent to the Advertising Manager, Elsevier Science Publishers B.V. (North-Holland), Journal Division, P.O. Box 211, 1000 AE Amsterdam, The Netherlands.
